Search Notes

Examiner Rao,

Here are the results of the search you requested.

Please feel free to contact me if you have any questions.

Sequence search request for 10/086,082

From: Manjunath N. Rao

Art Unit 1652, Room 10A11 Mail Box in Room 10D 01

Phone: 306-5681

Date: 7-2-03

Please search the following as soon as possible for application with serial number 10/086,082

- 1. SEQ ID NO:1, against all <u>commercial nucleic acid databases</u> including <u>issued patents database</u> and <u>pending application database</u> and provide a <u>print of all results</u>.
- 2. SEQ ID NO: 2 against all <u>commercial protein databases</u> including <u>issued patents database</u> and <u>pending</u> <u>application database</u> and provide a <u>print of all results</u>.

If you have any questions please call me at the above phone number.

Thanks

Manjunath N. Rao, Ph.D. Biotechnology Patent Examiner Art Unit 1652, Room 10A11 Mail Box in 10D01 Crystal Mall 1, USPTO.

Biotech-Chem Library

Questions about the scope or the results of the search? Contact the searcher or contact:

Mary Hale, Information Branch Supervisor 308-4258, CM1-1E01

Vol	untary Results Feedback Form
>	I am an examiner in Workgroup: Example: 1610
~	Relevant prior art found, search results used as follows:
	102 rejection
	103 rejection
	Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	Foreign Patent(s)
	Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
>	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.
Cor	nments:

Droportol/send completed forms to STIC/Blotech-Chem Library CM1 ∺ Girc⊁Desk :

Pending Nucleic Acid and Pending Amino Acid database searches generate two sets of results each. The Pending databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions .rapm and .rapn

Because they contain data that is confidential, the results of Pending database searches should not be left in the case.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Petermination of this BAC-cad sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BUGP). The BGCP is constructing a physical map of the Drosophila. The BGCP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BGCP brosophila and melanogaster EAC library was prepared by Kazutoyo Googawa and Aaron Marmoest in Pleater de Jong's Laboratory in the Department of Cancor Genetics at the Rowell Park Cancor Institute in Buffalo. NY. The library is named RPCI-38 and was constructed by partial ECORI digestion of Prosophila DNA provided by the BGCP from the isogenic strain vis. The manual RPCI-38 and was constructed by partial ECORI digestion of Prosophila DNA provided by the BGCP from the isogenic strain vis. The library and how to order individual BAC clones. The entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 993. Examined from the Erugia malayi BAC library constructed by Claire Whitton and Dr Mike Quail. The sequence was generated by inc Pathogen Sequencing Unit, The Sanger Institute, Cambridge, UK in Collaboration with Mark Blaxter, ICAPB, University of Edinburgh, Beginburgh, UK.

Seq primer: SP6 (ATTAGGIGACACTATAG)

Class: BAC ends.

/dec_stage="free day old up. 2AP XR, excised phademic palbescript SK: Site_1: EccRI; Site_2: XhoT; Seens were palbescript SK: Site_1: EccRI; Site_2: XhoT; Seens were properature on filter paper with water the dark at zoom temperature on filter paper with water nystation and cetotaxime in covered crystalization diskes. Roots were harvested. The tissue, total RNA, and poly(A) RNA were prepared, a cDNA library was made in the TJ Close lab (Choi, Close, Fentor) at the University of California, Riverside. The cDNA closes were in vivo excised to give plusoscript phagemids before cormalization was carried out. The mass excision of phagemid library and normalization were done in HT Nauyen lab by D. Zhang at Texas Tech University. Normalization protocol used was that of Soares, Plasmid DNA preparations and DNA sequencing were performed in the CD Anderson lab (all other authors)."

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                              1 cocyggaactocatgtggcc.....aatgcaattcatttggatcc 1442

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
